

⚓ BEFORE THE SURVEY

Your surveyor arrives Thursday.

The record he needs exists.

In two places.

WHAT HE ASKS FOR

He wants one thing.

For No.2 starting air
compressor: the last
completion, and the survey it
credits.

So you open three things.

 The PMS, for job history

 Class records, for the due-date

 A spreadsheet from drydock

↵ AND HERE IS THE THING

Both systems are right.

CLASS RECORD

**Survey due
14 Mar**

For the surveyor.

PMS RECORD

**Job interval
4,000 h**

For the engineer.

Different people. Different audits.

② THE QUESTION NOBODY ASKS

So why has nobody merged them?

Whoever owns the merged record owns the survey deadline.

↳ THE ARRANGEMENT

↳ **They are one object.**

Under continuous machinery survey, the class survey due-date and the PMS job due-date are the same object.

WHAT BREAKS IT

Three failures. Every time.

 Running hours entered late

 A job closed on paper at sea

 A counter reset nobody logged

Try it on one machine.

The last completion, and the survey it credits. From one place?

Most fleets cannot. That is not the crew.

If it takes more than one place, the reconciliation is the product.
